Patent No. 6444456
GENERAL INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             APPLICANT: Walke, D. Wade
APPLICANT: Wilganowski, Nathaniel L.
APPLICANT: Wilganowski, Nathaniel L.
APPLICANT: Turner, C. Alexander Jr.
TITLE OF INVENTION: No. 6444456el Human G-Coupled Protein Receptor Kinases and Polynuc
TITLE OF INVENTION: Encoding the Same
FILE REFERENCE: LEX-0147-USA
CURRENT APPLICATION NUMBER: US/09/802,117
CURRENT APPLICATION NUMBER: US/09/802,117
CURRENT FILING DATE: 2001-03-08
PRIOR APPLICATION NUMBER: US 60/188,449
PRIOR FILING DATE: 2000-03-10
NUMBER OF SEQ ID NOS: 5
COMMENCE OF SEQ ID NOS: 5
                                                                                                                                                                                                                                                                                                                                                                                                                                               TYPE: DNA

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                              Published Applications NA:*
